Top Entry

Top lid entry style filter bag housings are the premium configuration for ease of use and optimum performance. Channelling fluid into the centre of the bag seated at the top of the housing, this superior design guarantees proper sealing and convenient bag changeout.

Side Entry

Side body entry style filter bag housings are an economical alternative where the bag is positioned lower into the housing and secured with an additional hold down mechanism. Combining economy and ease of use, this is the most popular filter bag housing.

Multi - Round

Larger bodied housings that are able to hold anywhere from 2 to 40 filter bags under one lid accommodate any flow rate and dirt load. Eye bolt closure and davit arm lid makes for easy changeout of filter bags.

STARflo™

Utilizing the Patent Pending STARflo™ basket in any size two housing will double the available filtration surface area. STARflo™ will improve flow rate, pressure loss, dirt holding and surface life utilizing any filter bag material. It can be included with any IFM housing or sold independently to retrofit existing systems.

Portable Filter Cart

Available for rent or purchase, these carted filter systems come complete with everything required for portable filter bag service. Their mobility offers filtration to multiple locations for temporary filtration requirements. Housing any style of standard bag, they are suited to a wide range of applications.

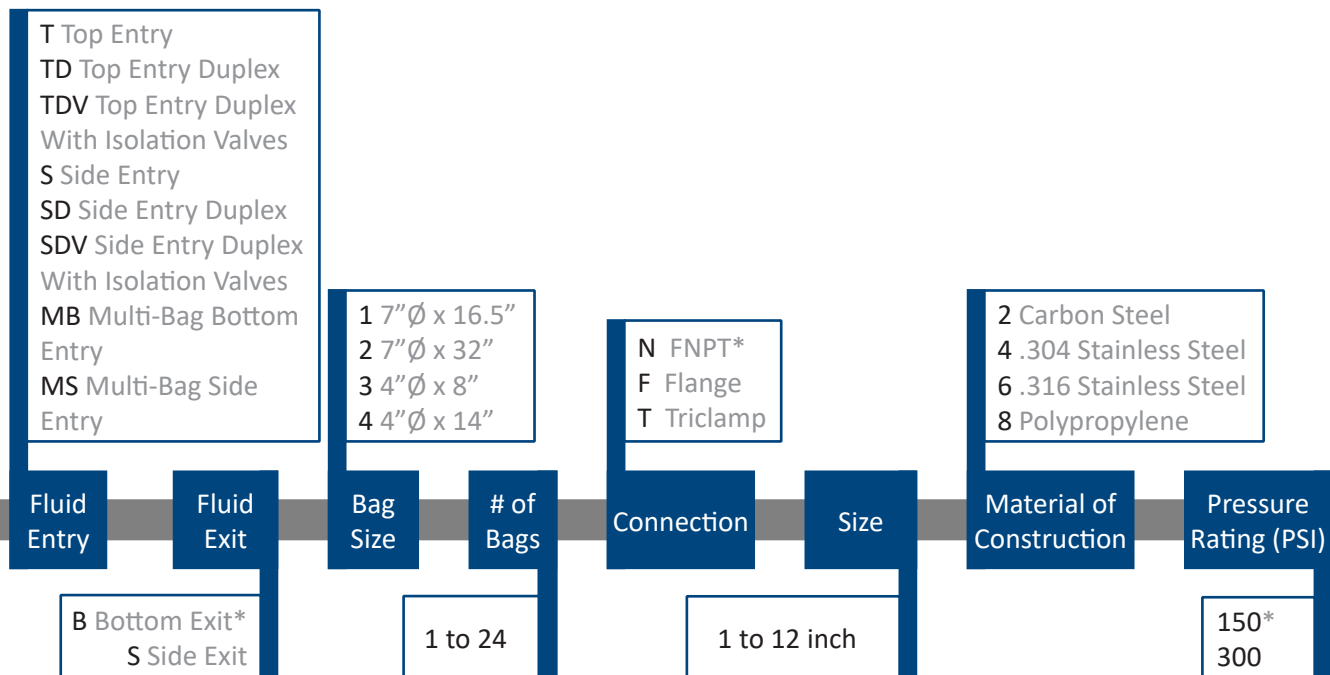

Parts & Accessories

Keep your system running smoothly with IFM replacement parts and accessories.

- O-Ring
- Retainer basket
- Eyebolt set
- Omega spring
- Magnetic insert
- Pressure gauge
- Displacement balloon

Product Codes

* Standard stock configuration – others are available upon request.

Vessels - Order Codes Example: TB1 1N22 150

Built to Perform

All IFM filter bag housings are designed and built to industry standards for long service life, ease of use and reliable performance (code certification available).

Versatility of Design

Along with our complete line of liquid filter bags and housings, our experienced team can help analyze your system requirements and recommend the style and arrangement that best suits your application.
